DETAILED ACTION

Claim Objections

1. Claims 6-11 is objected to because of the following informalities:

Claim 6 line 13, "the electrical ground connection", lacks antecedent basis.

Claims 7-11 are included because of their dependency.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 and 12-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Zini et al (US 6,307,149, hereinafter Zini).

Regarding claim 1, Zini discloses an apparatus for establishing an electrical ground connection (see figure 7), comprising: a pipe (705) having an interior region; an electrically conductive element (720) disposed at the interior region of the pipe (see figure 7), and means (725) disposed outside the pipe (705) and operative to provide an electrically conductive path between the conductive element and an electrical ground source external to the pipe (see figure 7), whereby an electrical ground path is established with fluid (air located inside the pipe) in the interior region of the pipe (see figure 7).

Regarding claim 2, Zini discloses the apparatus, wherein the pipe (705) is substantially electrically nonconductive (column 6 line 9, fiberglass).

Regarding claim 3, Zini discloses the apparatus, wherein the conductive element (720) is spaced apart from an inner wall defining the interior region of the pipe (see figure 7).

Regarding claim 12, Zini discloses an apparatus (see figure 7) for establishing an electrical ground connection, comprising: an electrically nonconductive pipe element (705, see column 6 line 9); and an electrically conductive element (715) disposed within the pipe element (705), and extending outside the pipe element (705) for connection to an electrical ground source (725), whereby an electrical ground path is established between the ground source and an electrically conductive element in contact with the fluid (air located inside the pipe) in the nonconductive pipe element (see figure 7).

Regarding claim 13, Zini discloses a method for establishing an electrical ground connection (see figure 7), comprising the step of: disposing an electrical conductor (715) within an electrically nonconductive pipe element (705, column 6 lines 9), and providing a conductive path that extends from the electrical conductor (715) to a connection point (725) outside the pipe element, for attachment to an electrical ground (see figure 7).

Regarding claim 14, Zini discloses the method, comprising the further step of installing an apparatus (710 or see figure 7).

Allowable Subject Matter

3. Claims 4 and 5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is an examiner's statement of reasons for allowance: The primary reason for the indication of the allowability of claims 4 and 5 is:

Regarding claims 4 and 5, the prior art does not teach or fairly suggest in combination with the other claimed limitations of the conductive element being a metallic rod extending within the interior region.

This limitation is found in claims 4 and 5 and, is neither disclosed nor taught by the prior art of record, alone or in combination.

4. Claims 6-11 would be allowable if rewritten or amended to overcome the rejection(s) under Claims Objections, set forth in this Office action.

The following is an examiner's statement of reasons for allowance: The primary reason for the indication of the allowability of claims 6-11 is:

Regarding claims 6-11, the prior art does not teach or fairly suggest in combination with the other claimed limitations of a plumbing fitting comprising a plumbing element and an electrical conductor associated with the plumbing element for contact with fluid therein, so as to establish an electrical conductive path between the conductor and the fluid.

This limitation is found in claims 6-11 and, is neither disclosed nor taught by the prior art of record, alone or in combination.

Conclusion

- 5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Leto (US 5,460,532), Franks, Jr. (US 4,993,960 and US 6,727,430), Kies (US 4,577,053), Roberts (US 4,885,428), Wellman et al (US 6,744,305) and Newman (US 5,663,525) disclose an electrical grounding system
- 6. Any inquiry concerning this communication should be directed to Angel R. Estrada at telephone number (571) 272-1973. The Examiner can normally be reached on Monday-Friday (8:30 -5:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Dean Reichard can be reached on (571) 272-2800 Ext: 31. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0956.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
